SUMMARY

I am a final-year BSc Information Technology student with strong analytical and detail-oriented skills. I have a solid academic background in systems analysis, software engineering, and database management, complemented by hands-on technical expertise in IT hardware operations and troubleshooting.

I uniquely combine my theoretical knowledge of programming languages such as Python, Java, and C# with practical experience in physical hardware diagnostics and upgrades, including clean OS installations and transitions involving RAM and SSDs. As a proven team collaborator and resilient problem solver, I am dedicated to delivering secure, high-performance systems while clearly and patiently explaining technical solutions to non-technical users.

I aspire to leverage this versatile blend of software engineering principles and hardware-level technical support skills in a graduate role in IT Operations, Tech Support, or Systems Administration.
